WEBSITE MANAGEMENT GUIDE

Managing Your Website From the Admin Panel

A simple, step-by-step guide to updating every part of your website yourself — text, images, services, blogs, menus, contact details, SEO and more. No technical knowledge needed.

In short: Your website has a powerful control panel ("Admin"). You can change almost everything yourself, and every change you save goes live on the website instantly and is stored safely in your database.

1. Welcome — What This Guide Covers

Your website comes with an easy-to-use Admin Panel (think of it as the "control centre" of your website). From here you can keep your website fresh and up to date without needing a developer for everyday changes.

You can update your text, images, services, blog posts, menus, contact details and social links, client reviews, job openings, prices, and even how your site appears on Google — all by yourself.

Three things to remember

- Everything you save goes LIVE immediately on your public website.
- All your content and all form enquiries are stored safely in your database (nothing is lost).
- The panel is designed for non-technical users — if you can fill a form, you can manage your website.

2. Getting Started

Logging in & out

What you can manage here: Opening the admin panel and signing in and out securely.

How to update:

1. Open your web browser and go to: your-website.com/admin
2. Enter your Username and Password, then click to sign in. (Keep these private — do not share them.)
3. When you are finished, click "Sign Out" at the bottom-left of the menu — especially on shared computers.

Understanding the screen

What you can manage here: How the admin is laid out so you always know where things are.

How to update:

1. LEFT side = the menu of all sections you can manage (Header, Footer, Blogs, SEO, and so on).
2. MIDDLE/RIGHT = the editor for whatever section you clicked on.
3. TOP bar = quick search, Backup, your Profile, and the "Content Studio" full editor.

How saving works

In any section, make your change and then click the "Save" (or "Save & Publish") button. Your change is published to the live website right away and stored in your database. There is no separate "upload" step.

> **Tip:** Because changes go live instantly, quickly re-check your text and spelling after saving. If something looks wrong, simply edit it again and Save.

The text editor (formatting)

Many description boxes have a small toolbar above them with buttons for Bold, Italic, Underline, Headings, Bullet lists, Numbered lists, Quote and Link. To use it: select the text you want to style, then click the button. This lets you create clean, nicely formatted content.

3. What You Can Manage — Section by Section

Below is every section of the admin panel and exactly what each one controls. Use the left-hand menu to open each one.

Dashboard (Overview)

What you can manage here: A quick summary of your website — number of enquiries, content counts, your lead pipeline, and a log of recent admin actions. This screen is for viewing, not editing.

Header & Top Menu

What you can manage here: The top of every page: your logo area, the top phone number, the "Get a Quote" button, the main navigation menu, and the dropdown ("mega") menus for Services, Industries and Technologies.

How to update:

1. Open "Header & Mega-Menu"
2. Edit the phone, button text, menu links or dropdown text
3. Click Save — it updates on every page

Footer, Contact Details & Social Links

What you can manage here: The bottom of every page: company description, your phone, email, address and working hours, your social media links (Facebook, Instagram, LinkedIn, X), the footer link columns, the WhatsApp button, and the newsletter box.

How to update:

1. Open "Footer & WhatsApp CMS"
2. Update contact details, social links or footer links
3. Click Save

> **Good to know:** The phone, email, address and social links you set in the Footer are used across your ENTIRE website (header, contact page, WhatsApp button, Google data). Change them once here and they update everywhere.

Hero & Trust Stats

What you can manage here: The large headline area at the very top of the homepage, its buttons, and the key number stats (projects delivered, happy clients, ratings, etc.).

How to update:

1. Open "Hero & Trust Stats"
2. Edit the headline, sub-text, button labels and numbers
3. Click Save

Home Page Sections

What you can manage here: The main content blocks on the homepage: the "Why Choose Us" pillars, the SEO and Web-Development pillar grids, the "Old agency vs LIMRA" comparison table, the step-by-step process, and the headings of the interactive tools.

How to update:

1. Open "Home Page Sections"
2. Edit the heading and the cards/rows for any block
3. Click Save & Publish

Page Content (About, Services, Legal & more)

What you can manage here: The written text on your inner pages: About, Services, Careers, Clients, Portfolio, your legal pages (Privacy, Terms, Cookie, Refund, Disclaimer, Acceptable Use), and the 6 service landing pages.

How to update:

1. Open "Page Content"
2. Choose the page from the row of buttons at the top
3. Edit each section (hero, cards, FAQs, etc.) and click Save & Publish

Services & Sub-Services

What you can manage here: Your catalogue of core services and their details.

How to update:

1. Open "Services & Sub-Services"
2. Edit an existing service or add a new one
3. Save

Industries & Technology Pages

What you can manage here: The dedicated pages for each industry you serve and each technology you use (these also feed the dropdown menus).

How to update:

1. Open "Industries & Tech Pages"
2. Edit the content for any industry or technology
3. Save

Portfolio / Case Studies

What you can manage here: Your project showcases and success stories.

How to update:

1. Open "Portfolio Case Studies"
2. Add or edit a case study

3. Save

Blogs & Articles

What you can manage here: Your blog posts — write new articles, edit existing ones, and publish.

How to update:

1. Open "Blogs & Editorial" (or the Content Studio for a larger editor)
2. Add a post: title, cover image, content, category
3. Save to publish it on the website

Reviews (Testimonials) & FAQs

What you can manage here: Client testimonials/reviews and the Frequently Asked Questions shown on your site.

How to update:

1. Open "Reviews & FAQs"
2. Add or edit a review or an FAQ
3. Save

Clients, Team, Pricing & Milestones

What you can manage here: Client brand logos, your leadership team members, your pricing packages, and your company timeline/milestones.

How to update:

1. Open "Clients, Team & Pricing"
2. Edit the relevant list
3. Save

Careers / Job Openings

What you can manage here: Your job posts and the careers page.

How to update:

1. Open "Careers & Job Openings"
2. Add a role (title, department, type, description)
3. Save

Media & Brand Assets

What you can manage here: Your library of images and logos used around the website.

How to update:

1. Open "Media & Brand Assets"
2. Register/upload an image asset
3. Use it where needed

Leads & Enquiries (your CRM)

What you can manage here: Every enquiry submitted through your website forms (and your contact page) lands here automatically. You can view each enquiry, change its status (New !’ Contacted !’ Qualified !’ Won), add private

notes, add a lead manually, and export the whole list to a spreadsheet (CSV).

How to update:

1. Open "Leads & Kanban CRM"
2. Click an enquiry to open it, update its status or add notes
3. Use "Export" to download the list

> **Good to know:** When a visitor submits your contact or enquiry form, it is saved to your database instantly and appears here — so you never miss a lead.

Newsletter Subscribers

What you can manage here: The list of people who subscribed to your newsletter. You can add, remove and export subscribers. (Found inside the Leads section.)

SEO, Google, Redirects & Website Files

What you can manage here: Everything about how your website appears on Google and how its web addresses behave. This is one of the most powerful sections.

Inside this section you can:

- Page SEO: for EVERY page, set the Google title, the description, keywords and the image used when the page is shared on social media.
- Global settings: your site title, Google Analytics ID, and Google/Bing verification codes.
- Change a page's web address (URL): move any page to a new address — the old address will automatically forward visitors to the new one (so old links and Google rankings keep working).
- Redirects: send any old link to a new one.
- robots.txt & sitemap: control what search engines are allowed to see. Your sitemap updates automatically whenever you add pages.
- App settings: your website's app name and theme colours.
- Tracking codes: paste Google, Meta (Facebook) or other tracking scripts into the header or footer.

Backup & Restore

What you can manage here: Download a complete backup file of all your website content, restore it later, or reset everything back to the original defaults.

How to update:

1. Open "Backup & Page Inspector"
2. Click Backup/Export to download a file; keep it safe
3. To restore, upload that file; to start fresh, use "Reset to defaults"

> **Tip:** Take a quick Backup before making large changes — it is your safety net.

Your Profile & Team

What you can manage here: Your name and role, and a reference list of your team members and their roles.

How to update:

1. Open "Admin Profile & Team"
2. Edit your profile details and Save

Content Studio (full-page editor)

What you can manage here: A dedicated, large editor (the "Content Studio" button at the top) for creating or editing any single item — a blog, service, case study, etc. — with a live preview and a preview of how it will look in Google search results.

4. Common Tasks — Quick Recipes

Here are the most common things you will want to do, and where to do them:

1. Change your phone number everywhere — Footer section !' update phone !' Save.
2. Update a social media link — Footer section !' Social links !' Save.
3. Publish a new blog post — Blogs (or Content Studio) !' fill title & content !' Save.
4. Post a new job opening — Careers !' Add !' Save.
5. Reply to / track an enquiry — Leads !' click the enquiry !' update status / add notes.
6. Add a client review — Reviews & FAQs !' add !' Save.
7. Edit the About (or any) page text — Page Content !' pick the page !' edit !' Save.
8. Change a page's web address — SEO !' "Page URL Overrides" !' set the new address !' Save.
9. Improve how a page shows on Google — SEO !' Page SEO !' edit title & description !' Save.

5. Good Practices & Tips

- Save after each change and quickly re-check your text — changes go live immediately.
- Use the formatting toolbar for clean, readable content (headings, bold, bullet lists).
- For best Google results, keep page titles around 50–60 characters and descriptions around 150 characters.
- Take a Backup before any big change.
- Keep your login details private and sign out on shared devices.
- Use clear, friendly language that your customers will understand.

6. Things Your Developer Handles

A few technical items are kept outside the panel for security and stability. Contact your developer for:

- Changing the login password (it is stored securely on the server, not in the browser or database).

- Creating brand-new TYPES of pages, or major design/layout changes.
- Connecting a new domain name or moving the website to live hosting.

7. Frequently Asked Questions

Q. Will my changes appear immediately?

A. Yes. Anything you save is published to the live website right away.

Q. Is my content and data safe?

A. Yes. All your content and every form enquiry are stored in your secure database. You can also download backups.

Q. What if I make a mistake?

A. Just edit it again and Save. For bigger issues, restore a backup, or use "Reset to defaults" to return to the original content.

Q. Do I need to know coding?

A. No. The panel is built for non-technical users — it works like filling in simple forms.

Q. Who can log in to the admin?

A. Anyone who has the admin username and password. Keep them private and only share with trusted team members.

Q. Where do my contact-form enquiries go?

A. Straight into the "Leads & Enquiries" section, and saved in your database — so you never miss one.

You are all set!

With this panel you can keep your website current, capture every lead, and manage your presence on Google — all on your own. For anything technical, your developer is just a message away.
